Footnotes

- 1 CPMC asserted for its for the 2021 and 2022 data that its electronic medical record database does not track address of facilities patients are transferred to, so CPMC's data includes both in-county and out-of-county discharge data.
- 2 SFGH claims it was unable to differentiate subacute patients standardly for the 2021 data report. For the 2022 data report, SFGH asserts it calculated the number of subacute patients through a query of medical charts of patients discharged to a skilled nursing facility that offered subacute care and met the medical criteria for subacute before discharge. This disproves previous misinformation from SFGH that its EPIC electronic healthcare records database could not identify patients discharged to any type of skilled nursing facility for any type of SNF care.
- 3 UCSF asserts that in its reports, some patients with a **subacute skilled nursing discharge disposition** were **discharged to facilities that don't offer subacute skilled nursing care**, and instead only offer skilled nursing care or other services. Therefore, UCSF claims the actual number of subacute skilled nursing discharges made by UCSF may be less than what it reports.
